

Job Description: Prompt Engineer

Position

Prompt Engineer

Location

Remote / Hybrid

Experience

0–3 Years (Freshers with strong AI project experience are encouraged to apply)

Employment Type

Full-Time

About the Role

We are seeking a Prompt Engineer to design, optimize, and evaluate prompts that improve the performance, reliability, and accuracy of AI systems powered by Large Language Models (LLMs). You will work closely with AI Engineers, Product Managers, Domain Experts, and Developers to build production-ready AI applications including chatbots, AI agents, RAG systems, workflow automation tools, and enterprise AI solutions.

This role requires a combination of analytical thinking, experimentation, software development knowledge, and a deep understanding of how modern LLMs behave under different contexts and instructions.

Key Responsibilities

Prompt Design & Optimization

- Design, test, and refine prompts for various AI applications.
- Develop structured prompting frameworks for consistent AI outputs.
- Optimize prompts to improve accuracy, relevance, reasoning quality, and user experience.
- Create reusable prompt templates for different business use cases.

AI System Development

- Build prompt workflows for conversational AI systems.
- Develop prompts for AI agents performing multi-step reasoning and task execution.
- Design prompts for content generation, summarization, classification, extraction, and analysis tasks.
- Collaborate with engineers to integrate prompts into production systems.

Evaluation & Testing

- Create evaluation datasets and benchmark AI responses.
- Measure prompt performance using predefined metrics.
- Identify hallucinations, inconsistencies, and failure modes.
- Conduct A/B testing of prompt strategies and system configurations.

Retrieval-Augmented Generation (RAG)

- Design prompts for RAG pipelines.
- Improve retrieval quality through query transformation and context engineering.
- Optimize context windows and grounding techniques.
- Work with vector databases and document retrieval systems.

AI Agent Development

- Create prompts for autonomous and semi-autonomous AI agents.
- Define tool-calling behaviors and decision-making frameworks.
- Develop planning and reasoning strategies for agentic workflows.
- Improve agent reliability and task completion rates.

Documentation

- Maintain prompt libraries and best practices.
 - Document prompt experiments, findings, and optimization techniques.
 - Create internal standards for prompt engineering and AI quality assurance.
-

Required Qualifications

Education

- Bachelor's degree in Computer Science, Artificial Intelligence, Information Technology, Data Science, Linguistics, or related fields.

Technical Skills

Large Language Models

- Understanding of LLM architecture and capabilities.
- Experience working with models such as:
 - GPT
 - Claude
 - Gemini
 - Llama

Prompt Engineering

- Chain-of-Thought prompting
- Few-shot prompting
- Zero-shot prompting
- Structured output generation
- Role-based prompting
- Context engineering
- Prompt evaluation methodologies

Programming

- Python
- Basic SQL
- JSON and API integration

AI Frameworks

- LangChain
- LangGraph
- AI orchestration frameworks

Retrieval Systems

- RAG architectures
- Embedding models
- Vector search

- Knowledge base design
-

Preferred Qualifications

- Experience building AI chatbots or AI assistants.
 - Familiarity with prompt evaluation frameworks.
 - Understanding of AI safety and hallucination mitigation.
 - Experience with workflow automation systems.
 - Knowledge of fine-tuning and model adaptation techniques.
 - Experience building AI agents with tool calling capabilities.
-

Preferred Tools & Technologies

AI Platforms

- OpenAI APIs
- Anthropic APIs
- Google AI Models

Vector Databases

- Pinecone
- Qdrant
- Weaviate
- Chroma

Evaluation & Observability

- LangSmith
 - Weights & Biases
 - Prompt evaluation frameworks
-

Sample Projects We Value

- AI Customer Support Assistant
 - Enterprise Knowledge Chatbot
 - RAG-Based Document Search System
 - AI Research Assistant
 - Multi-Agent Workflow Automation
 - AI Resume Screening Tool
 - AI Content Generation Platform
 - AI-Powered Business Analytics Assistant
-

Soft Skills

- Strong analytical and critical thinking skills.
 - Excellent written communication.
 - Ability to break down complex problems into structured workflows.
 - Curiosity about AI systems and emerging technologies.
 - Experimentation mindset with attention to detail.
-

Success Metrics

Within the first 6 months, you will:

- Improve AI response quality and consistency.
 - Reduce hallucination rates in production systems.
 - Develop reusable prompt frameworks across products.
 - Increase task completion success rates for AI agents.
 - Contribute to measurable improvements in user satisfaction.
-

What Makes a Strong Candidate?

- Has built real-world AI applications, not just experimented with prompts.
- Understands RAG, context engineering, and agentic workflows.
- Can systematically evaluate and improve AI performance.
- Thinks like a product engineer, not just a prompt writer.

- Knows how to combine prompting, retrieval, tools, and workflows to solve business problems.

Salary Range (India): ₹6–20 LPA depending on AI experience, project portfolio, and understanding of production AI systems.
